SUMMARY

Aspiring Cloud/DevOps engineer with hands-on AWS EC2 deployment experience, a B.Sc. foundation in Computer Science, and working knowledge of containerized application architecture (Docker, Nginx, PostgreSQL). Comfortable across the full deployment lifecycle — containerizing applications with Docker, configuring reverse proxies and HTTPS, managing cloud networking and security groups, and troubleshooting production infrastructure issues end to end.

TECHNICAL SKILLS

Cloud(AWS): EC2, Elastic IP, Security Groups, EBS, IAM fundamentals, VPC fundamentals.
DevOps & Infrastructure: Docker, Docker Compose, Nginx, Gunicorn, Linux/Ubuntu server administration, Let's Encrypt/SSL, Git.
Programming Languages: Python, R, JavaScript, SQL.
Web & Frameworks: Django, CSS, FastAPI, basic UI development
Data & Databases: PostgreSQL, SQLite, SQL (joins, aggregations, window functions), Pandas, NumPy, statistical analysis.

PROJECTS

Spend Shelf — Expense Analytics *Django, PostgreSQL, Docker, Nginx, AWS EC2*

- Deployed a multi-container Django application (PostgreSQL, Nginx, Gunicorn) to AWS EC2, configuring security groups, Elastic IP, and reverse-proxy architecture.
- Diagnosed a silent Gunicorn misconfiguration where a YAML indentation error in Docker Compose caused the app to bind to 127.0.0.1 instead of 0.0.0.0, blocking all container-to-container traffic
- Resolved a stale-DNS issue where Nginx cached a dead container IP after a service restart, causing intermittent 502 errors — traced the container-recreation/IP-caching interaction to its root cause
- Set up HTTPS with automated Let's Encrypt certificate renewal and environment-based secrets management
- Built the underlying Django application with PostgreSQL and statistical analytics (mean, variance, regression-based forecasting)

CodeScan — AI-Powered Handwritten Code IDE *Python, FastAPI, Google Gemini API*

- Built a FastAPI service integrating a Google Gemini vision-LLM pipeline to recognize and disambiguate handwritten code from images, exposing 6 REST endpoints with Pydantic-validated request/response schemas.
- Engineered a multi-stage processing pipeline (image preprocessing → OCR → language and dependency detection across 9 languages) with a pytest test suite covering core modules.
- Currently extending the project toward a containerized, sandboxed execution layer (Docker) with an automated self-healing debug loop

Trip Canvas — Travel Data & Planning Platform *Python, Django, SQLite, APIs*

- Integrated multiple external APIs (weather, mapping) to combine and structure data from disparate sources into a unified planning dataset.
- Built budget-aware planning logic that aggregates and tracks cost data across trip tasks and checklists.

CERTIFICATES

- Architecting solutions on AWS — Amazon Web Services.
- Building Data Lakes on AWS — Amazon Web Services.
- AWS Cloud Technical Essentials — Amazon Web Services.
- AI Agents Fundamentals — Hugging Face.
- Complete Python Developer in 2023: Zero to Mastery — Udemy

EDUCATION

CHRIST (Deemed to be University), Bangalore, Karnataka Aug 2021 – May 2024
B.Sc. CMS (Computer Science, Mathematics and Statistics)
